Abstract. Write a 200–250 word summary of the problem, method, results, and contribution. Use actual findings and avoid citations.

Keywords: keyword one; keyword two; keyword three

1 Introduction

Define the logistics or operations problem, research gap and contribution. Vehicle routing has a long methodological history (Dantzig & Ramser, 1959). Replace this example with relevant sources.

2 Literature Review

Synthesize competing approaches and explain limitations. For a narrative citation use Dantzig and Ramser (1959). All reference entries must match the cited sources.

3 Methodology

Describe the data, assumptions, model, baselines and evaluation metrics so the work can be replicated. Define all symbols and units. A simple illustrative objective is

$$\min Z = \sum_{i=1}^n c_i x_i. \quad (1)$$

Here c_i is the unit cost and x_i the decision quantity. Replace this with your actual formulation and constraints.

4 Results and Discussion

Report actual findings, uncertainty and operational implications. Table 1 contains instructions rather than data.

Table 1: Example reporting structure

Method	Metric (unit)	Measured result
Baseline	Define metric	Insert result
Proposed method	Same metric	Insert result

5 Conclusion

Answer the research question, explain supported contributions and limitations, and identify future work.

Acknowledgments and Declarations

Include applicable funding, contributions, conflicts, ethics, data availability and AI-tool use statements.
